

Water on Earth

This is your guided version. It uses shorter sentences, word banks, and fill-in-the-blank notes to help you learn one step at a time. Read slowly. Fill in every blank. You can do this!

Georgia Standard S6E3 · Supported Reading

WHAT YOU'LL LEARN

01 Earth: The Water Planet

03 The Water Cycle

05 Waves & Currents

02 Where the Water Is

04 The Ocean Floor

06 Tides

Name: _____

Period: _____

Date: _____

3.1 Earth: The Water Planet

My Learning Goal

I can explain why Earth is called the "water planet."

From space, Earth looks **blue**. This is because water covers most of it.

About **71%** of Earth's surface is water. That is most of the planet!

Water is important because:

- All living things need water to live.
- Water shapes the land.
- Water moves heat and causes weather.

Fill in the blank:

- About _____ % of Earth's surface is covered by water.

3.2 Where the Water Is

My Learning Goal

I can tell where most of Earth's water is, and how little is fresh.

There are two kinds of water: **salt water** and **fresh water**.

Where Is Earth's Water?

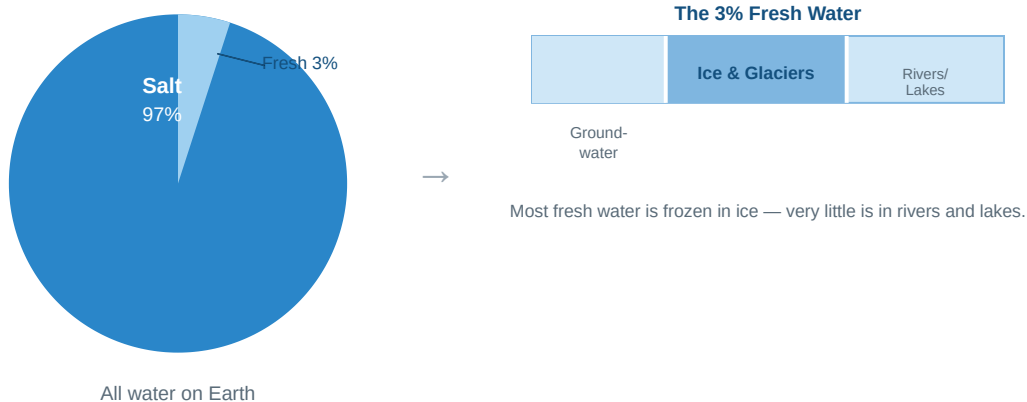

Figure 3.1 — Almost all water is salty. Only a little is fresh, and most fresh water is frozen. (The fresh slice is drawn bigger so you can see it.)

Word Bank

salt

fresh

frozen

97%

3%

Fill in the blanks:

- About _____ of Earth's water is salt water (the ocean).
- Only about _____ of Earth's water is fresh water.
- You cannot drink _____ water because it is too salty.
- Most fresh water is _____ in ice and glaciers.

! Watch Out

Even though Earth has lots of water, less than 1% is fresh water we can easily use. We must protect it!

3.3 The Water Cycle

🎯 My Learning Goal

I can name the steps of the water cycle and what powers it.

Water moves in a loop that never stops. This is the **water cycle**.

The **Sun** gives the energy that makes the cycle work.

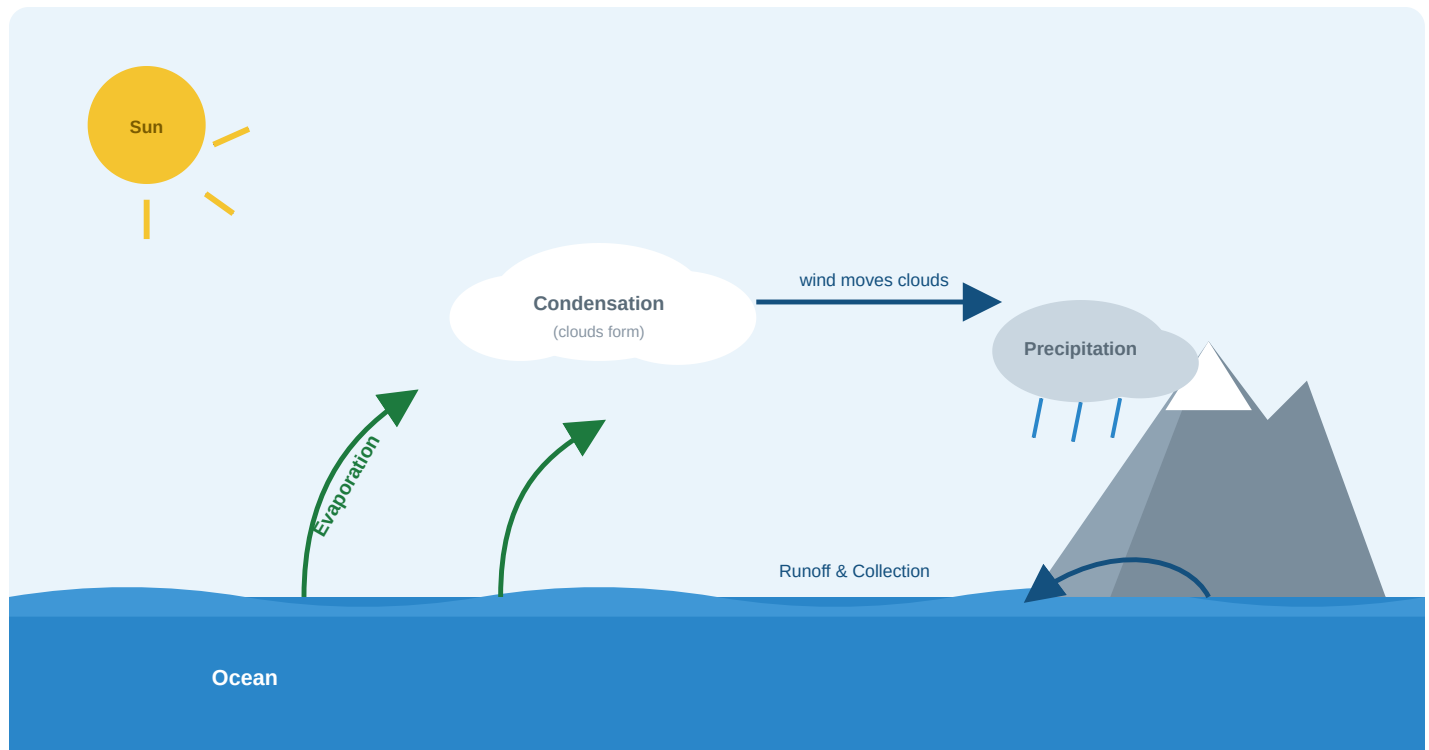

Figure 3.2 — The Sun powers the water cycle: evaporation, condensation, precipitation, and collection.

Match each step to what it means. Write the letter:

Step	What Happens
Evaporation ____	A. Water falls as rain or snow
Condensation ____	B. The Sun heats water; it rises as a gas
Precipitation ____	C. Water collects in oceans and lakes again
Collection ____	D. Water vapor cools and forms clouds

★ Remember

The **Sun** lifts water into the sky. **Gravity** brings it back down. No Sun = no water cycle.

Fill in the blank: The energy for the water cycle comes from the _____.

3.4 The Ocean Floor

🎯 My Learning Goal

I can name the main parts of the ocean floor.

The bottom of the ocean is not flat. It has mountains, valleys, and flat areas.

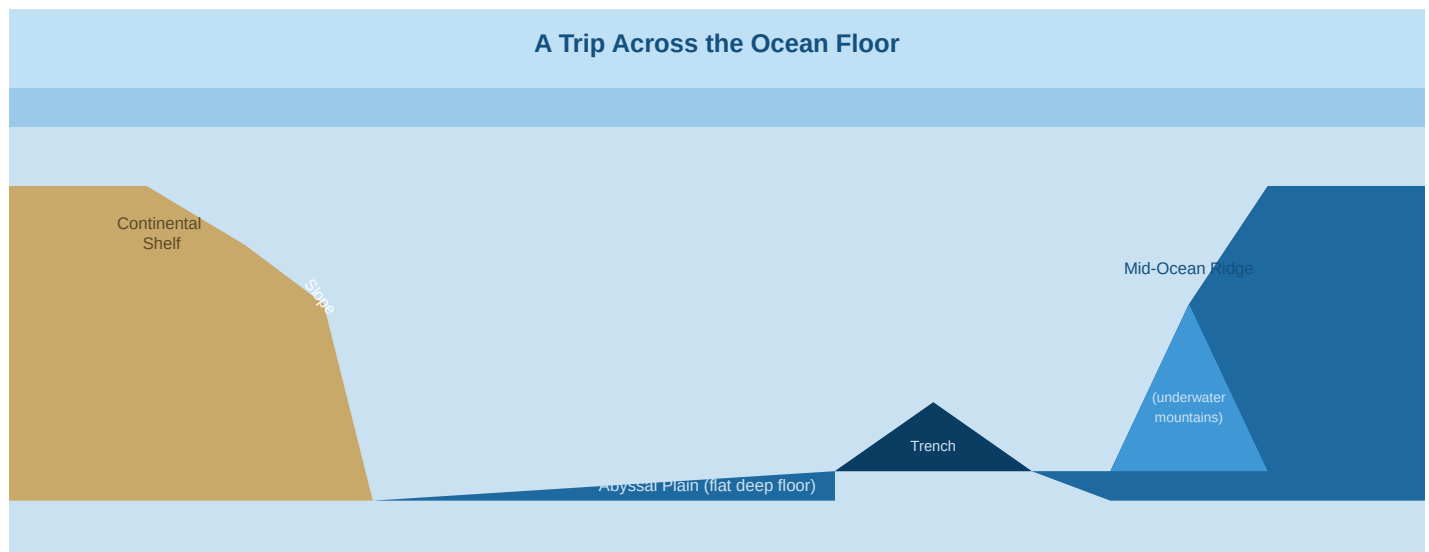

Figure 3.3 — The ocean floor has shelves, slopes, flat plains, ridges, and deep trenches.

Draw a line to match each part to what it is:

Part	What It Is
Continental Shelf	A. Underwater mountain range
Abyssal Plain	B. The shallow edge near land
Mid-Ocean Ridge	C. The deepest, narrow valley
Trench	D. The wide, flat deep floor

3.5 Waves & Currents

My Learning Goal

I can tell the difference between a wave and a current.

Both move ocean water, but they are different:

- A **wave** carries **energy**. The water mostly stays in one place and bobs up and down.
- A **current** is water moving in **one direction**, like a river inside the ocean.

Most waves are made by **wind**. Currents move **heat** around the planet.

Circle the correct answer:

- A (wave / current) is like a river flowing through the ocean.
- Most waves are caused by (wind / the Moon).

3.6 Tides

My Learning Goal

I can explain what causes the tides.

The **tides** are the daily rise and fall of the ocean.

Tides are caused mostly by the **Moon's gravity** pulling on the ocean.

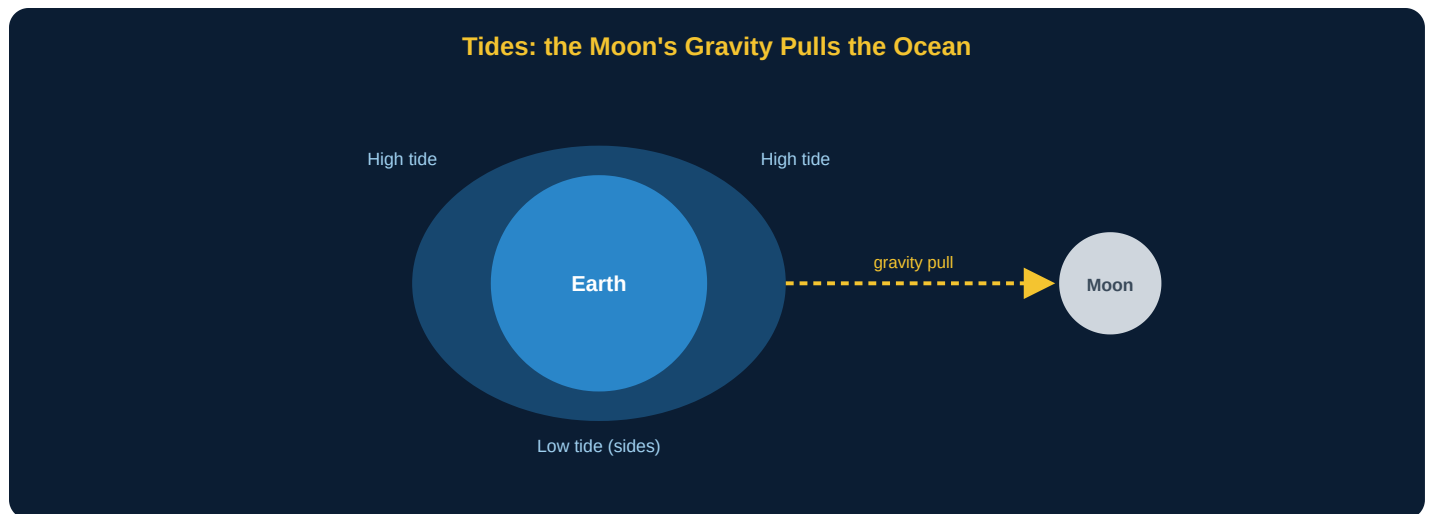

Figure 3.4 — The Moon's gravity pulls the ocean into bulges. Under a bulge = high tide.

Most beaches get **two high tides** and **two low tides** each day.

Fill in the blank: The tides are caused mostly by the _____ gravity.

Chapter 3 Review

Show What You Know

1. About ____ % of Earth's surface is covered by water.
2. Most of Earth's water is _____ water (the ocean).
3. The _____ gives the energy that powers the water cycle.
4. The deepest, narrow valley in the ocean floor is a _____.
5. The _____ gravity causes the tides.
