

Natural Resources

This is your guided version. It uses shorter sentences, word banks, and fill-in-the-blank notes to help you learn one step at a time. Read slowly. Fill in every blank. You can do this!

|---------------------------------------|------------------------------------|
| 01 What Are Natural Resources? | 02 Renewable Resources |
| 03 Nonrenewable Resources | 04 Conserving Our Resources |
| 05 A Warming Planet | 06 What We Can Do |

Name: _____

Period: _____

Date: _____

6.1 What Are Natural Resources?

My Learning Goal

I can explain the difference between renewable and nonrenewable resources.

A **natural resource** is anything from Earth that people use.

Examples: water, air, soil, metals, and fuels.

There are two groups:

- **Renewable** = refills naturally. It **won't run out**.
- **Nonrenewable** = limited amount. It **can run out**.

Figure 6.1 — Renewable resources refill naturally. Nonrenewable resources can run out.

Circle the correct answer:

- A resource that refills naturally is (renewable / nonrenewable).
- A resource that can run out is (renewable / nonrenewable).

6.2 Renewable Resources

My Learning Goal

I can name renewable energy resources.

Renewable resources keep coming back. They are also called **sustainable**.

Word Bank

solar

wind

hydro (water)

geothermal

biomass

tidal

Match each renewable resource to its energy source:

Resource	Energy Source
Solar ____	A. Moving air spins turbines
Wind ____	B. Sunlight
Hydro ____	C. Heat from inside the Earth
Geothermal ____	D. Falling or flowing water

★ Remember

Sustainable means we can use it without using it up. The Sun and wind never run out!

6.3 Nonrenewable Resources

🎯 My Learning Goal

I can name the nonrenewable resources and why they can run out.

Nonrenewable resources are limited. They take **millions of years** to form.

The three **fossil fuels** are:

- Coal
- Oil
- Natural gas

Nuclear energy comes from **uranium**, a mined metal. It is also nonrenewable.

! The Trade-Off

Fossil fuels are powerful, but they will **run out**, and burning them adds **greenhouse gases** to the air.

📝 Word Bank

coal

oil

natural gas

uranium

Fill in the blanks (the three fossil fuels):

- _____, _____, and _____.

6.4 Conserving Our Resources

🎯 My Learning Goal

I can name ways to protect water, soil, and air.

Conservation means using resources carefully so they last.

Three resources we must protect:

Resource	One Way to Protect It
Water	Fix leaks; take shorter showers
Soil	Plant trees and cover crops to stop erosion
Air	Use cleaner energy; drive less

The Three R's

Reduce (use less), **Reuse** (use again), **Recycle** (make old into new).

Fill in the blank: Using resources carefully so they last is called _____.

6.5 A Warming Planet

My Learning Goal

I can explain why Earth's temperature has been rising.

Over the past **100 years**, Earth's average temperature has slowly gone **up**.

Global Temperature Has Risen Over the Past Century

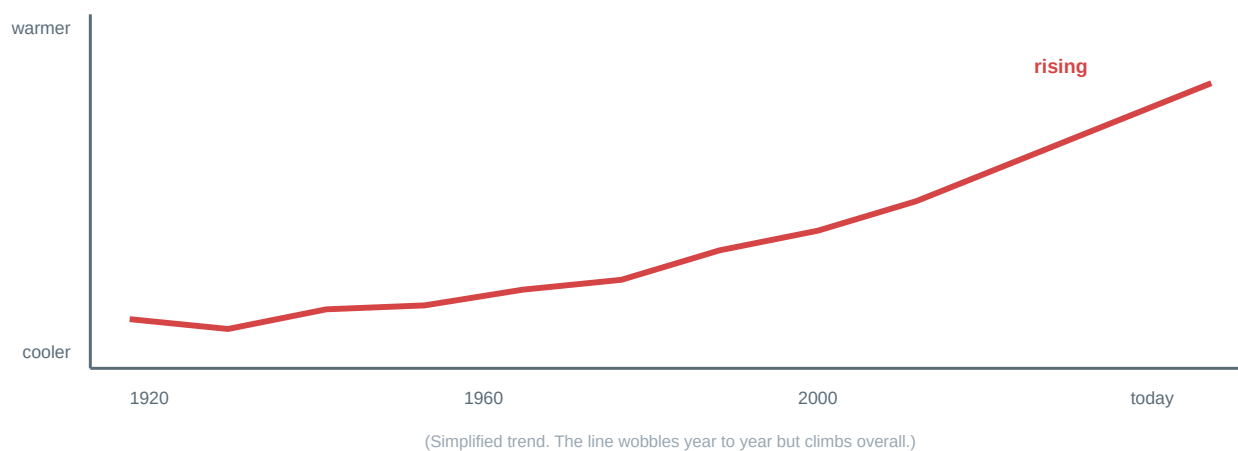

Figure 6.2 — Earth's average temperature over the last 100 years. The trend goes up.

Why? When we burn fossil fuels, we add extra **greenhouse gases** like **carbon dioxide (CO₂)**.

More greenhouse gases trap more heat. More heat = warmer planet.

Burning Fossil Fuels Adds Greenhouse Gases

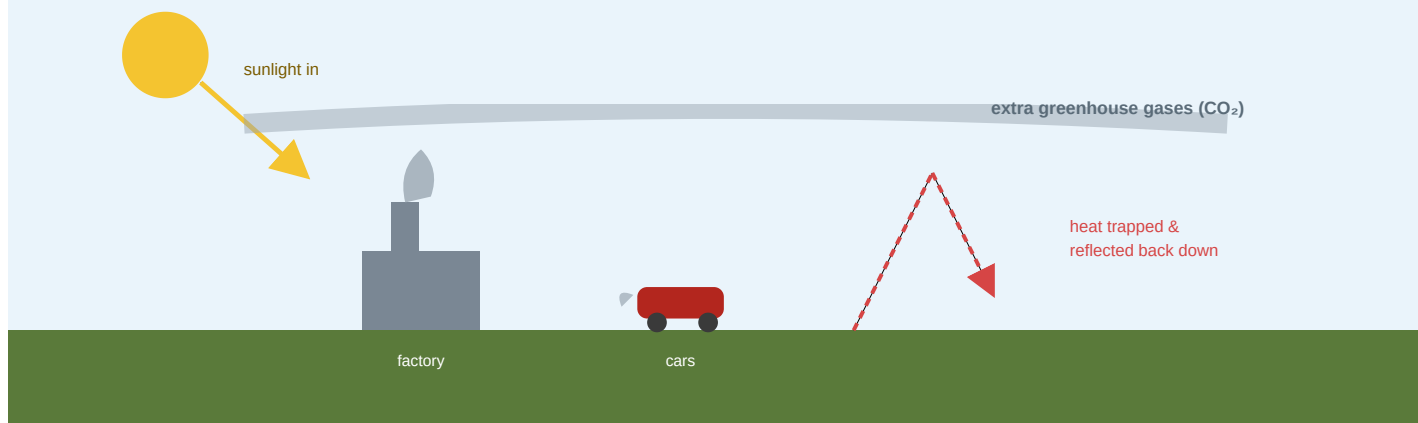

Figure 6.3 — Burning fossil fuels adds CO_2 , which traps more heat.

Fill in the blanks:

- Earth's temperature has gone _____ over the past century. (up / down)
- Burning fossil fuels adds _____ gases to the air.

6.6 What We Can Do

My Learning Goal

I can name ways to reduce greenhouse gases.

Our choices can help! Here are some ideas:

Big Solutions	Everyday Habits
Use renewable energy (solar, wind)	Turn off lights
Plant and protect forests	Walk, bike, or carpool
Reduce factory pollution	Reduce, reuse, recycle

Trees Help!

Plants take in carbon dioxide and give off oxygen. Planting trees helps clean the air.

Fill in the blank: Trees take in _____ and give off oxygen.

Chapter 6 Review

Show What You Know

1. A resource that refills naturally is _____ (renewable / nonrenewable).
2. The three fossil fuels are coal, _____, and natural gas.
3. Using resources carefully so they last is called _____.
4. Earth's temperature has gone _____ over the past century.
5. Burning fossil fuels adds _____ gases that trap heat.
